

# Chronic Degenerative Diseases

## **Illnesses Related to Heavy Metals**

*Presented by Robert Abell ND LAc*

---

**Teleconference Recorded Dec. 10, 2008**

---

Have you ever wondered why some patients never seem to get better? One of the primary causes is environmental heavy metals, and the inability to safely and effectively remove these toxic metals from the human system. Learn how to recognize and treat the modern toxic patient. Better understand which diagnostic tests determine specific heavy metal toxicity. Determine why modern treatments are not the best options and what are the steps to take when first treating for heavy metals. Learn why most patients are burdened with heavy metal toxicity and how to avoid it in the first place. Treatment guidelines will be provided for: arthritis; kidney disease; multiple sclerosis; Alzheimer's; Parkinson's Disease, chronic sinus disease; infertility; prostate disease; neuralgias; thyroid disease; cancer; autism; ADD and ADHD.
