Cardiovascular Disease

Presented by Dickson Thom DDS ND

Teleconference Recorded Dec. 12, 2007

Cardiovascular disease remains the number one killer in the Western world. As primary care physicians, prevention is of critical importance in the day to day management of cardiac patients. Learn about some of the common issues regarding cardiovascular disease including: risk factors for; laboratory values to help determine risk of cardiovascular disease; stroke; how to offset/address side effects of statin drugs; congestive heart failure; and general management of cardiac patients diagnosed.
