Neurological Disorders

Presented by Dickson Thom DDS ND

Teleconference Recorded Oct. 15, 2008

There is ample evidence that pinpoints neurological disorders as one of the greatest threats to public health. Unless immediate action is taken globally, the neurological burden is likely to become an increasingly serious and unmanageable problem in all countries, states a new publication from the WHO on Public Health Challenges. Build your knowledge with an overview of neuroanatomy, neurological history and the 5 most prevalent causes of neurological disorders. Learn new approaches for patients with migraines.

Better explain memory loss and teach Alzheimer's prevention. Understand the management of febrile seizures and what to tell parents if their child has one. Know the warning signs and rapid screening for stroke. Address ways on handling tremors. Learn the likely etiology of MS and how to manage a patient with this condition. Treatment guidelines provided for: primary headaches; memory loss, stroke febrile seizures; and MS.
