5:00 PM – 6:30 PM PST | 8:00 PM – 9:30 PM EST

---

Incontinence mainly affects women after child bearing and also occurs in the elderly when collagen health deteriorates. The affects on lifestyle and urogenital health can be severe. This teleconference will look at the physical therapies, lifestyle habit improvements, tissue repair nutrients and remedies.

### TREATMENT GUIDELINES PROVIDED FOR

- Urethra sphincter control
- Physical examination and treatment
- Aggravating factors
- Hormonal implications

### KEY LEARNING HIGHLIGHTS

- Determining the cause for each individual
- Physical therapies to alleviate symptoms
- Physiological states to promote restoration
- Levels of treatment and remedies
